

Test Scenarios

1-User Login and Authentication

- Verify login and registration using email, phone number, or third-party apps (Google, Apple)
- Test password recovery flow using email/phone
- Validate account locking after multiple failed login attempts
- Check session management and logout functionality

2-Profile Management

- Validate adding, editing, or deleting experiences, skills, and recommendations
- Test updating profile details like name, photo, headline, and summary

3-Connections and Networking

- Validate connection requests (accept, decline)
- Test "Follow" functionality for companies or influencers
- Verify contact import and synchronization
- Verify the visibility of connections and the news feed

4-Messaging and chats

- Test sending/receiving text messages, voice notes, and file attachments
- Validate filtering, archiving, and deleting messages

5-Job Search

- Test job search using keywords, filters, and location
- Verify job application process (upload resume, LinkedIn profile as CV)
- Validate job alerts and saved jobs functionality

6-Content Feed

- Validate visibility of posts and Videos
- Test interactions like comments, likes, shares, and reactions.

7-Notifications

- Test different types of notifications (connection requests, comments, job postings).
- Ensure custom notification settings for push and in-app alerts.

8-Search

- Check search functionality for people, jobs, and content.
- Test the accuracy and relevance of search results.

9-Settings and Preferences

- Test updating account preferences (e.g., language, default privacy settings)
- Verify notifications and emails received based on preference settings

10- Localization

- Verify date, time, and currency format based on locale
- Test language-switching functionality and content translations

11-Security Testing

- Check encryption of sensitive data (credentials, chat messages)
- Test account recovery using a security question or backup code

12-Performance testing

- Validate the app's responsiveness under high user traffic
- Test load times for profile pages, feed content, and job listings
- Verify smooth scrolling behavior on the feed

13-Integration with External Services

- Validate sharing LinkedIn profiles and job posts via external channels (WhatsApp, Email)

Feature/Functionality	Priority	Reason for Priority
Login and Authentication	High	Core access functionality; failure blocks users entirely
Profile Management	Medium	Essential for professional visibility but not a blocker for accessing the app
Connections and Networking	High	Enables users to build and manage professional relationships
Messaging and chats	High	Promotes user activity and networking among professionals
Job Search	High	Aligns with LinkedIn's primary business model and user goals
Content Feed	Medium	Key driver of user engagement but secondary to login and messaging
Notifications	Medium	Enhances the user experience but doesn't block critical functionalities
Search	High	Enables users to find professionals using filters like location, industry, or job title
Localization	Low	Improves inclusivity but doesn't impact the majority of users
Performance Testing	Low	Adds value but isn't directly tied to a single functionality

2-

Bug Title	Steps	attachment	severity	priority
Profile URL Changes Not Saving or Reflecting Externally	1-Log in to LinkedIn and navigate to your profile settings 2-Click on "Edit" to modify the public profile URL 3-Enter any edit you want and save the changes 4-Navigate to your Profile again 5-Observe that the URL has reverted to the original value	Bug 1	Medium	High
Saved Icon in Videos does not Indicate Save Status	1-Log in to you account 2-Navigate to Videos section 3-Save any video 4-Revisit the same video post later and attempt to save it again	Bug 2	Low	Medium
Saved Sections Display Incorrect Count and Empty Content	1-Log in to LinkedIn and navigate to "My Items" 2-Observe the number displayed next to the "Saved posts" section 3-Click on it to view the saved content	Bug 3	Medium	High
Position Search Displays Unrelated Fields	1-Log in to LinkedIn or navigate to the job search section 2-In the search bar, type in a specific job position 3-Observe the search results	Bug 4	Medium	High
Location-Based Job Search Displays Incorrect Job Locations	<ol style="list-style-type: none"> 1. Log in to LinkedIn and navigate to the job search section 2. In the location filter, enter a specific city or region 3. Click on "Search" to view the job listings 4. Observe that the job results displayed do not match the specified location 	Bug 5	Medium	High

Experience Level Filter Displays Incorrect Experience Levels	1-Log in to LinkedIn or navigate to the job search section 2-Apply the "Experience Level" filter and select a specific experience level 3-Click on "Search" to view the job listing. 4-Observe the job results	Bug 6	Medium	High
